## **DETAILED ACTION**

### ***Response to Arguments***

1. Applicant's arguments, see p.11-12, filed 04/02/09, with respect to claim objections and 101 rejection have been fully considered and are persuasive. The rejection and objection of the claims has been withdrawn.

### ***Drawings***

2. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the *"synchronization point that identifies an amount of delay incurred from transmission of the sample sequences from the correlation outputs"* must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet

Art Unit: 2611

submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### ***Specification***

3. The disclosure is objected to because of the following informalities: the specification on page 9, lines 13-16 appear to repeat the claimed limitation of *"synchronization point that identifies an amount of delay incurred from transmission of the sample sequences from the correlation outputs"*. In several parts of the specification describes wherein the synchronization point is determined based on the highest correlation values, for example description related to Figure 10. However, the specification does not further describe the relationship between the highest correlation values and the "amount of delay incurred from transmission" in order to arrive at the limitation of *"synchronization point that identifies an amount of delay incurred from transmission of the sample sequences from the correlation outputs"*. Appropriate correction is required.

### ***Conclusion***

4. This application is in condition for allowance except for the following formal matters:  
Drawing and specification objections.

Art Unit: 2611

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 25 USPQ 74, 453 O.G. 213, (Comm'r Pat. 1935).

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.
